## REMARKS

Claims 1-25 are pending in this application. Claims 1-3, 6-17, 19 and 20 were rejected. Claims 4, 5, 18 and 21-25 were objected to. Claims 8, 9, 17, 19 and 21 have been amended. The Examiner's reconsideration of the rejection is respectfully requested in view of the above amendment and the following remarks.

Applicants gratefully acknowledge the Examiner's indication that claims 4, 5 and 18 would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claim. Applicants also gratefully acknowledge the Examiner's indication that claims 21-25 are allowed.

## Claim Objections

Claims 21-25 are objected to for the reason set forth on page 2 of the Office Action.

Applicants have amended claim 21 to address all issues raised by Examiner.

Therefore, Applicants respectfully request that the claim objection be withdrawn.

## REJECTIONS UNDER 35 U.S.C. § 103

Claims 1, 2, 6, 7, 17 and 19 were rejected under 35 U.S.C. § 103(a) as unpatentable over Park et al. (U.S. Patent No. 6,522,376) in view of Kim et al. (U.S. Publication No. 20020054256).

Applicants respectfully submit that the combination of <u>Park</u> and <u>Kim</u> does not disclose or suggest a pixel electrode having a first height at a reflecting area and a second height at a transmitting area, wherein the first height is greater than the second height with respect to a substrate, as essentially recited in claims 1 and 17.

As recognized by the Examiner, <u>Park</u> does not disclose or suggest a pixel electrode having a first height at a reflecting area and a second height at a transmitting area, wherein the first height is greater than the second height with respect to a substrate.

Kim does not disclose or suggest the above feature. Examiner states that Kim discloses that the pixel electrode has a first height at the reflecting area and a second height at the transmitting area wherein the first height is greater than the second height with respect to the substrate. See page 3 of the Office Action. Applicants respectfully disagree. Kim discloses a transparent electrode (132) having the same height with respect to a substrate (101), whether at a reflecting area or at a transmitting area. (See. Fig. 4).

Accordingly, even assuming, arguendo, that <u>Park</u> and <u>Kim</u> were combined, the combination does not disclose or suggest a pixel electrode having a first height at a reflecting area and a second height at a transmitting area, wherein the first height is greater than the second height with respect to a substrate, as essentially recited in claims 1 and 17.

Applicants respectfully submit that claims 1 and 17 are allowable for additional reasons. For example, the combination of <u>Park</u> and <u>Kim</u> does not disclose or suggest a reflecting plate having a first edge extended to a transmitting area, as essentially recited in claims 1 and 17.

Park does not disclose or suggest a reflecting plate having a first edge extended to a transmitting area. Examiner states that a reflecting area (68) has a first edge extended to a transmitting area (60) in Fig. 6. Applicants respectfully disagree and submit that element (60) or the area where the element (60) is located is <u>not</u> a transmitting area. In

stark contrast, the area where the element (60) is located is a boundary between two unit pixel areas defined by data lines (60) and gate lines (50). See Figs. 4 and 6. The transmitting area disclosed by Park is **element (72)** having a rectangular shape.

<u>Kim</u> does not disclose or suggest a reflecting plate having a first edge extended to a transmitting area.

Accordingly, even assuming, arguendo, that <u>Park</u> and <u>Kim</u> were combined, the combination does not disclose or suggest a reflecting plate having a first edge extended to a transmitting area, as essentially recited in claims 1 and 17.

Claims 2, 6 and 7 depend upon claim 1. Claim 19 depends upon claim 17. These dependent claims are believed to be patentable for at least the same reasons provided for the allowable base claims.

Therefore, Applicants respectfully request that the Examiner withdraw the rejections of claims 1, 2, 6, 7, 17 and 19 under 35 U.S.C. § 103(a) and claims 1, 2, 6, 7, 17 and 19 are in condition for allowance.

Claim 3 was rejected under 35 U.S.C. § 103(a) as unpatentable over <u>Park</u> and <u>Kim</u> in view of <u>Ha</u> (U.S. Patent No. 6,704,081).

Claim 3 depends upon claim 1. Claim 3 is believed to be patentable over the combination of <u>Park</u>, <u>Kim</u> and <u>Ha</u> for at least the same reasons given above for the base claim 1 because the <u>Park</u>, <u>Kim</u> and <u>Ha</u> combination does not disclose or suggest the embodiments recited in claim 1. Accordingly, reconsideration of the obviousness rejections is respectfully requested.

Claims 8-11, 15, and 16 were rejected under 35 U.S.C. § 103(a) as unpatentable over <u>Park</u> in view of <u>Baek</u> (U.S. Application Publication No. 20020036730).

Applicants respectfully submit that the combination of cited references does not disclose or suggest a pixel electrode having a first height at a reflecting area and a second height at a transmitting area, wherein the first height is greater than the second height with respect to a lower substrate, as essentially recited in claim 8.

As stated above, <u>Park</u> does not disclose or suggest a pixel electrode having a first height at a reflecting area and a second height at a transmitting area, wherein the first height is greater than the second height with respect to a lower substrate, as essentially recited in claim 8.

<u>Baek</u> does not disclose or suggest this feature. In contrast, <u>Baek</u> discloses a pixel electrode (120) having <u>a single height</u> at a reflecting area and at a transmitting area with respect to a lower substrate (110). (<u>See</u>. Fig. 3).

Accordingly, even assuming, arguendo, that <u>Park</u> and <u>Baek</u> were combined, the combination does not disclose or suggest a pixel electrode having a first height at a reflecting area and a second height at a transmitting area, wherein the first height is greater than the second height with respect to a lower substrate, as essentially recited in claim 8.

Applicants respectfully submit that claim 8 is allowable for additional reasons. For example, the combination of <u>Park</u> and <u>Baek</u> does not disclose or suggest a reflecting plate having a first edge extended to a transmitting area, as essentially recited in claim 8.

<u>Park</u> does not disclose or suggest a reflecting plate having a first edge extended to a transmitting area for the same reasons provided above.

<u>Baek</u> does not disclose or suggest a reflecting plate having a first edge extended to a transmitting area.

Accordingly, even assuming, arguendo, that <u>Park</u> and <u>Baek</u> were combined, the combination does not disclose or suggest a reflecting plate having a first edge extended to a transmitting area, as essentially recited in claim 8.

Claims 9, 10, 11, 15 and 16 depend upon claim 8. These dependent claims are believed to be patentable for at least the same reasons provided for the allowable base claims.

Claim 12 was rejected under 35 U.S.C. § 103(a) as unpatentable over <u>Park</u> and <u>Baek</u> in view of <u>Auman</u> (U.S. Patent No. 5,856,432).

Claim 12 depends upon claim 8. The claim rejection is based, in part, on the rejection of claim 8, based on the combination of <u>Park</u> and <u>Baek</u>. However, as explained above, the combination of <u>Park</u> and <u>Baek</u> is legally deficient to establish *prima facie* case of obviousness against claim 8. Therefore, the dependent claim 12 is believed to be allowable for at least the reasons given for base claim 8.

Claim 20 was rejected under 35 U.S.C. § 103(a) as unpatentable over <u>Park</u> and Kim in view of <u>Auman</u>.

Claim 20 depends upon claim 17. The claim rejection is based, in part, on the rejection of claim 17, based on the combination of <u>Park</u> and <u>Kim</u>. However, as explained above, the combination of <u>Park</u> and <u>Kim</u> is legally deficient to establish *prima facie* case of obviousness against claim 17. Therefore, the dependent claim 20 is believed to be allowable for at least the reasons given for base claim 17.

Claim 13 was rejected under 35 U.S.C. § 103(a) as unpatentable over <u>Park</u>, <u>Kim</u>, and <u>Baek</u> in view of <u>Ha</u>.

Claim 13 depends upon claim 8. The claim rejection is based, in part, on the

rejection of claim 8, based on the combination of Park and Baek. However, as explained

above, the combination of Park and Baek is legally deficient to establish prima facie case

of obviousness against claim 8. Therefore, the dependent claim 13 is believed to be

allowable for at least the reasons given for base claim 8.

Claim 14 was rejected under 35 U.S.C. § 103(a) as unpatentable over Park, Kim

and Baek in view of Acosta (U.S. Application Publication No. 20030067575).

Claim 14 depends upon claim 8. The claim rejection is based, in part, on the

rejection of claim 8, based on the combination of Park and Baek. However, as explained

above, the combination of Park and Baek is legally deficient to establish prima facie case

of obviousness against claim 8. Therefore, the dependent claim 14 is believed to be

allowable for at least the reasons given for base claim 8.

For the foregoing reasons, the present application, including claims 1-25, is

believed to be in condition for allowance. The Examiner's early and favorable action is

respectfully requested. The Examiner is invited to contact the undersigned if he has any

questions or comments in this matter.

Respectfully submitted,

Frank Chau
